The die spacer that you can remove.

- Restores stone or epoxy dies to their original, clean condition.
- Allows true verification of fit to the original die form.
- Eliminates see-through of undesirable die spacer color under all-ceramic crowns.

Just paint it on and peel it away. The Perfectim Systems Peel-Away Die Spacer Kit includes a paint-on die hardener, two die spacers, respective thinners and applicators, and die lubricant in a convenient storage tray. All kit components are also sold separately.

The Peel-Away Die Spacer can be used on stone or epoxy dies. Following crown fabrication, the Peel-Away Die Spacer is easily removed and final check for fit is made on the original clean die.

The Peel-Away Die Spacer was developed as a companion product to Perfectim® Systems line of vinyl polysiloxane impression materials from J. Morita USA. The Peel-Away Die Spacer is highly recommended for use on dies produced from impressions taken using the Hydraulic and Hydrophobic (H&H) Impression Technique with Perfectim Systems Blue Velvet® and Flexi-Velvet®. For information contact J. Morita USA.

Peel-Away Die Spacer System
A Bench-Top Guide

1

STEP 1:
Apply one even coat of Die Hardener.
Extend coverage 0.5 millimeter below the outlined margin. Air dry 2-3 minutes.

2

STEP 2:
SHAKE BOTTLE WELL.
Apply Die Spacer #1 to nearly block out the die hardener.
Begin a slow, even brush stroke 0.5 mm to 1.0 mm above the die margin and over the occlusal or incisal edge. Air dry 2-3 minutes.

3

STEP 3:
SHAKE BOTTLE WELL.
Apply Die Spacer #2 on top of Spacer #1. Use a quick even stroke. Leave 0.5 mm of Spacer #1 showing at the margin. Air dry at least 60 seconds.

4

STEP 4.
SHAKE BOTTLE WELL.
Apply Die Lubricant to the die immediately before normal wax up.

5

STEP 5:
Gently nudge the Spacers to create a rolled edge. Slowly peel the Spacers away from the die. Fit the restoration to the die.

NOTE: If it becomes necessary to thin Die Spacer liquids to their original viscosity, always use Thinner #1 with Die Spacer #1 and Thinner #2 with Die Spacer #2 or Die Hardener.

IMPORTANT: Do not use near heat or flame. Recap bottles after use. Use in well ventilated area.

For more detailed instructions see the instructions for use accompanying the Perfectim Systems Peel-Away Die Spacer Kit.
